**Self-Directed Learning Activities**

Model	Program Description	Program Features	Program Goals
1. Self-Directed Learning (SDL)	Students are given complete control over their learning process, including the selection of topics, materials, and pace.	Highly flexible, student-centered, and self-paced.	Develop self-direction, autonomy, and responsibility.
2. Self-Directed Learning with Support (SDL with Support)	Students have significant control over their learning, but receive structured support and guidance from the instructor.	Structured support, student-centered, and self-paced.	Develop self-direction, autonomy, and responsibility while receiving support.
3. Self-Directed Learning with Guidance (SDL with Guidance)	Students have some control over their learning, but receive more structured support and guidance from the instructor.	Guided support, student-centered, and self-paced.	Develop self-direction, autonomy, and responsibility with more support.
4. Self-Directed Learning with Structure (SDL with Structure)	Students have limited control over their learning, but receive structured support and guidance from the instructor.	Structured support, student-centered, and self-paced.	Develop self-direction, autonomy, and responsibility with more structure.
5. Self-Directed Learning with Instruction (SDL with Instruction)	Students have minimal control over their learning, but receive structured support and guidance from the instructor.	Structured support, student-centered, and self-paced.	Develop self-direction, autonomy, and responsibility with more instruction.

QUESTION 42

1. **Identify the components of the system.**  
 2. **Describe the function of each component.**  
 3. **Explain how the components interact.**

Component	Function	Interaction
Input Device	Provides user input to the system.	Transmits data to the CPU.
Output Device	Displays system output to the user.	Receives data from the CPU.
Storage Device	Stores data and programs.	Exchanges data with the CPU.
Network Interface	Enables communication with other systems.	Transmits and receives data over a network.
System Software	Manages hardware resources and provides a platform for application software.	Coordinates the operation of all hardware components.
Application Software	Provides specific functionality for the user.	Executes on the system software and uses hardware resources.

Figure 1.1

1. **Identify the components of the system.**  
 2. **Describe the function of each component.**  
 3. **Explain how the components interact.**

Component	Function	Interaction
Input Device (Keyboard/Mouse)	Provides user input to the system.	Transmits data to the CPU.
Central Processing Unit (CPU)	Executes instructions and processes data.	Coordinates the flow of information between other components.
Memory (RAM)	Stores data temporarily for quick access.	Provides fast access to data being processed by the CPU.
Storage Device (Hard Drive/SSD)	Stores data permanently.	Provides long-term storage for data and programs.
Output Device (Monitor/Printer)	Displays or produces the results of the system's processing.	Receives data from the CPU to be presented to the user.

4. **Discuss the importance of system integration.**  
 5. **Identify potential challenges in system integration.**

Challenge	Importance of Integration
Compatibility Issues	Ensuring all components work together seamlessly is crucial for system performance.
Data Interoperability	Integrating data from different sources allows for a unified view and better decision-making.
Security Concerns	Proper integration ensures that security protocols are consistent across all parts of the system.
Scalability	Well-integrated systems can more easily scale to accommodate future growth.
Cost Management	Integration can reduce costs by eliminating redundant components and streamlining processes.
